

Equipment and Network Maintenance Procedures

1. Network Equipment Checks

Network equipment must be inspected every 90 days with thorough checks on performance and security. Logs must be updated with all findings.

2. Scheduled Downtime Notifications

Scheduled maintenance and downtime must be communicated to affected customers at least 48 hours in advance.

3. Incident Response Times

Network incidents require initial response within 2 hours and resolution within 24 hours where possible.

4. Maintenance Personnel Responsibilities

Technicians are responsible for following checklists and documenting all maintenance tasks accurately.

5. Equipment Replacement Criteria

Equipment reaching end-of-life or with repeated failures must be replaced promptly according to inventory protocols.
