

# Product Quality and Maintenance Guidelines

## 1. Product Quality Assurance

Products must comply with industry standards and internal quality benchmarks prior to release. Quality audits are conducted monthly. Defect rates must remain below 2 percent.

## 2. Maintenance Scheduling

Equipment maintenance must occur every 90 days. Maintenance logs must be updated immediately after service. Overdue maintenance triggers alerts and review.

## 3. Fault Reporting Procedures

All faults must be reported within 24 hours of detection. Faults affecting service delivery require immediate escalation.

## 4. Replacement and Repair Policies

Defective products are eligible for repair or replacement within warranty periods. Claims must be processed within 7 days.

## 5. Documentation and Traceability

Maintenance and quality check records must be stored with clear traceability. Records are subject to periodic audits.
